

Latisse Application

Step 1: Before applying	Before applying Latisse® daily, ensure your face is clean and that makeup and contact lenses are removed.
Step 2: Prepare the applicator	Remove an applicator from its tray. Then, holding the sterile applicator horizontally, place one drop of Latisse® solution on the area of the applicator closest to the tip, but not on the tip.
Step 3: Apply to skin using applicator	Immediately draw the applicator carefully along the skin at the base of the upper eyelashes (where the eyelashes meet the skin) going from the inner part of your lash line to the outer part.
Step 4: Blot excess	Blot any excess solution beyond the eyelid with a tissue.
Step 5: Dispose of applicator	Dispose of the applicator after one use. Repeat for the opposite eyelid, using a new, sterile applicator to help minimize any potential for contamination from one eyelid to another.

Application reminders

- Apply Latisse® daily for 16 weeks. **Do not reduce or stop application when you first notice results**
- If you miss a dose, don't try to play "catch-up." Just apply Latisse® the next day
- **DO NOT APPLY** directly into the eye or to the lower lid; blot excess solution with a tissue
- It is possible for hair growth to occur on other areas of your skin that Latisse® solution frequently touches
- Only use the sterile applicator supplied with the Latisse® kit to apply the product
- Don't allow the tip of the bottle or applicator to touch your fingers or any other unintended surface, as contamination by common bacteria is known to cause infections
- Remove contact lenses prior to applying Latisse® solution. Contact lenses may be reinserted 15 minutes after application
- If you get Latisse® in your eye, do not rinse your eye. It is not expected to cause harm
- Remember, if you stop using Latisse®, lashes will gradually return to their previous appearance
